

**THE ROAD
IS THERE
FOR EVERYONE!**

*From virtual analysis to validation in our test centre:
we are making the roads that little bit safer for pedestrians.*

Single-source pedestrian protection function development: one partner for the customer

Cars arouse emotions in us. For all sorts of reasons. Sometimes it's the colour, sometimes the shape, sometimes performance, and sometimes safety.

From our experience as the global automotive industry's independent engineering service provider, we know that vehicle safety is of key importance when developing complete vehicles. We offer all the services relevant to pedestrian protection, from **project management** and **simulation** through to **testing** in our fully equipped test facilities. At many sites, and also close to you.

Are you interested in finding out how our experience can help you create both function and emotion? Then ask us.
